

Notice

Computer: Daewoo Athlon XP 1500+ PC, Model number CT6720-C15 and 16
Date of release: July 2002
Subject: Windows XP to show Computer CPU Model and Speed

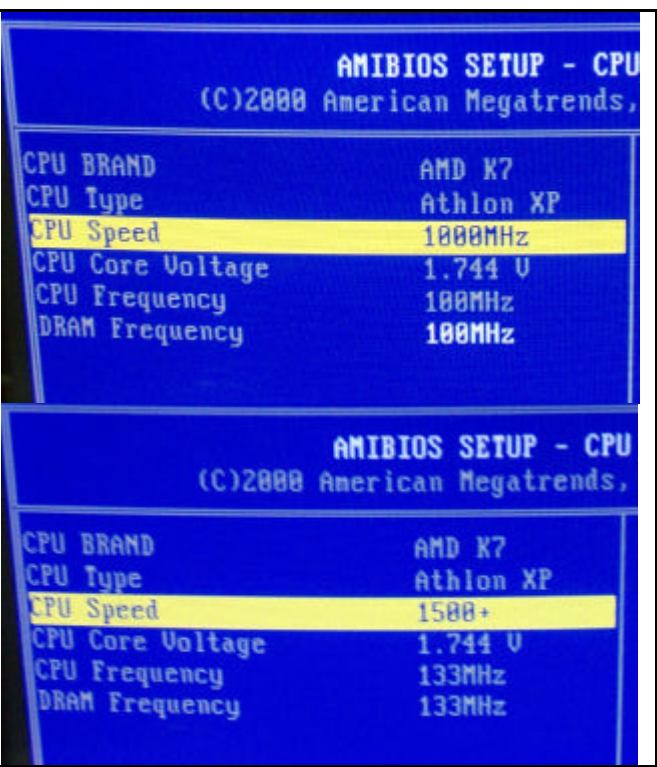

Please check [Start] ? [Control Panel] ? [System].

If computer section shows “**AMD Athlon Processor 995MHz**”, you need to follow the below steps and change CMOS setting. This will allow Windows XP to display the proper computer CPU model and speed.

Steps:

Before	
1. Turn off the computer. 2. Press Power Button to turn on. Upon booting the computer, as you see the DAEWOO screen, hold the DELETE key. “ AMIBIOS SIMPLE SETUP UTILITY ” screen will show up.	
3. Select CPU PnP Setup , press [ENTER].	

4. In **CPU Speed**, current setting is **1000MHz**, change by pressing [Up] or [Down] key to **1500+**. CPU Frequency will change to 133MHz automatically.

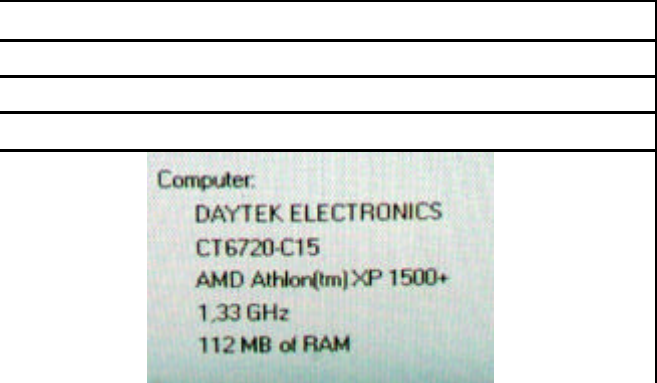

5. Press [ESC].

6. Press [F10].

7. Press [Y] key.

8. Press [Enter].

After

Computer will now continue the booting procedure. Upon finish, go to System Properties, Computer section, you will see **“AMD Athlon XP 1500+ 1.33GHz”**.
